FROM THE EDITOR'S DESK

Welcome back, explorers

This month is all about one question: is it real, or is it pretend? Pictures, videos and stories can be made by people, by computers, or by both, and it is not always easy to tell.

You do not need to be a scientist to check something. You need a few good questions and the patience to ask them. This paper is full of those questions.

As always, none of the activities need a phone or an account.

Justin Phillips
EDITOR IN CHIEF, THE GUIDED PLANET

BLOOP SAYS

I once thought a picture of a cat in a spacesuit was real. It was not. Let's get better at this together.

THE THINKING FOREST THINKING FOREST

How to check a picture

Four questions to ask before you believe, or share, a picture you have found.

Who made it? Look for the name of a person or an organisation you could check.

Where else is it? If something amazing happened, more than one trusted place will usually say so.

Does anything look odd? Hands, writing and shadows are good places to look closely.

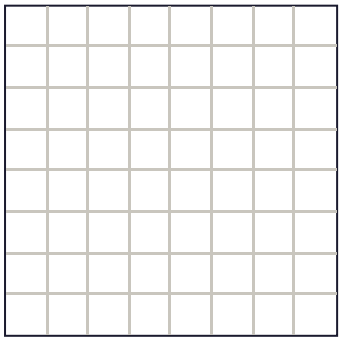

How does it make you feel? Pictures made to shock or to rush you deserve a slower look.

SAMPLE · NOT FOR PUBLICATION

ORBIT SAYS
My magnifier is enormous, but the best tool is a question.

ACTIVITY NO SCREEN NEEDED

64 SQUARES · 8 ACROSS · 8 DOWN

Hide a mistake

Draw a picture on the grid with one thing wrong in it. Can a grown up spot it?

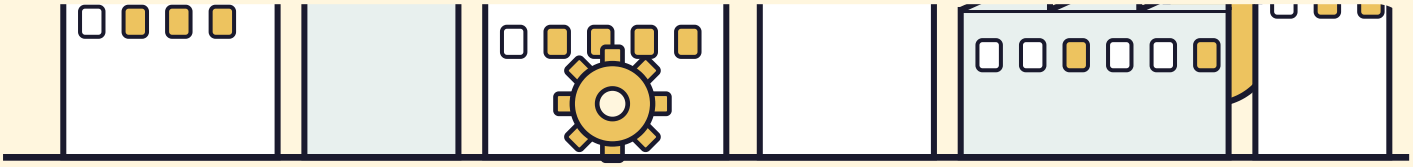

1. Draw something simple, like a house or a face.
2. Add one mistake, like a window in the sky.
3. Swap with someone and spot each other's mistake.

BUTTER LEAF SKY NIGHT

THE MAKER DISTRICT YOUNG INVENTORS

Young fact checkers

Story to be researched in week one and verified before print.

This page will carry projects by young people who built tools to check what is real. They are chosen at approval one.

THE MAKER DISTRICT · YOUR TURN

Design a fake detector

Invent a gadget that helps people check what they see. Start with the person it helps.

BLOOP SAYS

Mine beeps when a picture has six fingers. It also beeps at gloves. Work in progress.

ACTIVITY · NO SCREEN NEEDED

My fake detector

Fill in each box and draw big.

01 · DRAW IT

Draw your detector and label every part.

02 · WHO IT HELPS

Who gets fooled, and when?

03 · WHAT IT CHECKS

Hands, shadows, writing, where it came from?

04 · WHAT IT NOTICES

What clue does it look for?

05 · WHAT IT DOES BACK

A light, a sound, a message?

06 · NAME IT

A name worth remembering.

07 · TEST IT

How would you know it works?

SAMPLE · NOT FOR PUBLICATION

MAKER TIPS

- Test it on real and pretend pictures you made yourself.
- A good detector says how sure it is, not just yes or no.

THE RESEARCH ROOM WHAT SCIENTISTS KNOW

What research says about spotting fakes

Story to be researched in week one and verified before print.

Pictures
Photos and drawings.

To be researched.

Videos
Clips and shorts.

To be researched.

Stories
News and posts.

To be researched.

Voices
Audio and songs.

To be researched.

WHAT THE RESEARCH FOUND	Story to be researched in week one and verified before print.
WHAT IT CANNOT TELL US YET	Placeholder for the limits of the evidence, written once the evidence is in.

TALK ABOUT IT TOGETHER

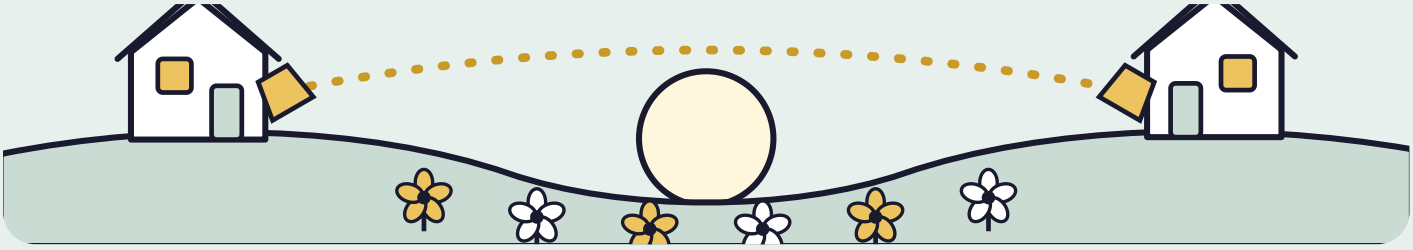

1. Have you ever been fooled by a picture?
2. What made you realise?

DIGI SAYS

We print what the evidence says, and we say what it cannot tell us.

SAMPLE · NOT FOR PUBLICATION

THE CONNECTION GARDEN · FRIENDSHIP

Kind words travel too

A kind message can be checked for one thing only: did it make someone's day?

Checking what is real matters. So does being someone people can trust online. When you share something, you are lending it your name.

If you are not sure something is true, it is fine not to pass it on. Waiting is a kind thing to do.

BEFORE YOU SHARE

- Is it true?
- Is it kind?
- Would I say it to their face?

PEBBLE SAYS

I turn things the right way round before I share them.

SAMPLE · NOT FOR PUBLICATION

ACTIVITY · NO SCREEN NEEDED

Send a true thing

Write a postcard about something true and good that happened this month.

DRAW THE TRUE AND GOOD THING

DEAR

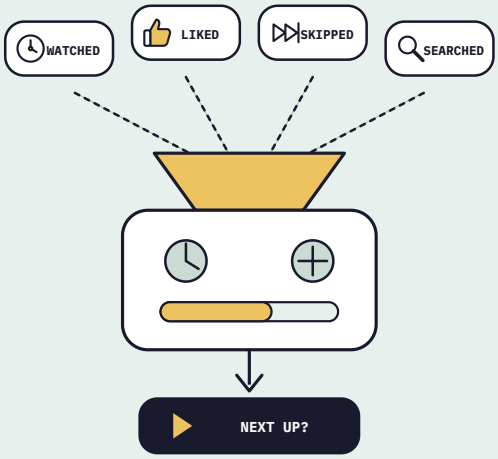

Post it with a grown up · Or hand it over

THE THINKING FOREST BLOOP INVESTIGATES

Was this picture made by a computer?

Bloop found a picture of a dog surfing a rainbow. Time for some clues.

BLOOP'S VERDICT

Case closed: no single clue proves it. Lots of clues together make a good guess, and a grown up can help you check.

An algorithm is a list of steps for solving a problem.[1] Some computers follow steps that make pictures, and some follow steps that recommend what to watch next.[2]

CLUE 1 — Look at the edges
Are there odd blurs or shapes where things meet?

CLUE 2 — Look at the details
Hands, teeth, writing and patterns can go wrong.

CLUE 3 — Look for the maker
Who posted it first, and do they say how it was made?

CLUE 4 — Look around
Does anyone trusted show the same thing?

TRY THIS, NO ACCOUNT NEEDED

- Make a picture yourself, then ask a grown up to guess how you made it.
- Play Real or Pretend on the next page.

THE THINKING FOREST · A PAPER GAME

Real or Pretend

One player is the Maker, one is the Detective. Can the Detective tell which cards are real?

BLOOP SAYS

I was the Detective and I said everything was pretend. That is not detecting, apparently.

PLAYERS · 2 TO 6

You need: the 12 cards, a pencil, the notebook below.

Set up

1. Cut out the 12 cards and shuffle them.
2. The Maker secretly marks some cards REAL and some PRETEND on the back.
3. Deal three cards face up.

Play five rounds

1. The Detective asks one question about a card.
2. The Maker answers truthfully.
3. The Detective says real or pretend, and checks the back.
4. After round five, swap jobs.

THEN TALK ABOUT IT

- Which questions helped most?
- Which cards fooled you, and why?

CUT OUT THE 12 VIDEO CARDS

Surfing dog ANIMALS	Sleeping cat ANIMALS	Moon base SPACE
Rocket launch SPACE	Huge goal SPORT	Team photo SPORT
Painted dragon ART	Clay owl ART	Robot band MUSIC
School choir MUSIC	Giant cake FOOD	Pizza face FOOD

GOING FURTHER

- Make your own cards from pictures you drew yourself.

THE FAMILY EXPLORER · FIVE GOOD THINGS

Five good things to explore together

Checked for this issue. Look again together before signing up for anything.

ORBIT SAYS

Same five places as last month, because they are still good. The list changes when something better comes along.

1 micro:bit MakeCode

Free, open source block coding for the BBC micro:bit, with a simulator that shows what your program will do. [1]

New this year: screen reader support for block coding, shaped with blind and low vision young people. [2]

WHO FOR Beginners, with a grown up
ACCOUNT Ask a grown up
`makecode.microbit.org`

2 Scratch

Snap code blocks together to make games, stories and animations. Free for everyone. [4]

Start small: make a cat move, then make it dance.

WHO FOR Ages 8 to 16 [3]
ACCOUNT Ask a grown up first
`scratch.mit.edu`

3 ESA Kids

Space news, facts, animations and downloads from the European Space Agency. [5]

Liked page 3? Find out more about life in space.

WHO FOR Ages 6 to 12 [5]
ACCOUNT None
`www.esa.int/kids/en/home`

4 Night sky highlights

Free guides from Royal Museums Greenwich to what is up in the sky. [6]

Looking up needs no screen at all. Read it together, then go outside.

WHO FOR Everyone
ACCOUNT None
OFFLINE Jot the highlights on paper
`www.rmg.co.uk/stories/space-astronomy`

5 Code Club projects

Free step by step coding and making guides from the Raspberry Pi Foundation. [7] Code Clubs are free for all school aged young people. [8]

Ask your school or library about a club near you.

WHO FOR School aged young people
ACCOUNT Not to read the guides
`projects.raspberrypi.org`
